

Empathy Map

Composite user: Manhattan tourist planning a day trip

SAYS:

"I just go when TripAdvisor says it's popular, but it's always crowded."

"I wish I knew the best time to visit before I went."

"I look up 'best time to visit Central Park' but only get general tips."

THINKS:

Crowds ruin otherwise great experiences

"High rating = worth visiting" but timing is the missing piece

I don't want to plan too much — I just want smart suggestions

Accessibility info is hard to trust online

FEELS:

Frustrated when arriving at a crowded spot

Anxious about wasting limited travel days

Curious if there are "hidden gem" times at popular spots

Relieved when a visit goes smoothly with no surprises

DOES:

Checks TripAdvisor ratings before visiting

Visits landmarks early morning or on weekdays to avoid crowds

Asks locals or hotel staff for timing tips

Gives up on certain spots after bad first experiences

PAINS:

No single source combines rating + busyness level data

Accessibility information is scattered and unreliable

Opening hours not always synced with current reality

GAINS:

Discover high-rated spots at their quietest moments

Confident accessibility filtering for mobility-impaired companions

A selected "gem" recommendation to start the day right
